

Deployment Options for Xacta[®] 360

The premier solution for evidence-based IT risk management and compliance is available in a variety of convenient deployment options suitable for your particular requirements. Each deployment option enables you to manage the compliance and risk posture of your enterprise IT systems and applications wherever they reside.

On Premises

The powerful capabilities of Xacta 360 are available for environments that require on-premises deployment. On-premises deployment puts you in full control of the application and associated data.

- You own and manage the software in your environment/corporate data center
- You own and manage the operating system
- You own and manage the data
- Manage Amazon Web Services (AWS) workloads from on premises

Private SaaS

With Xacta 360 as a private SaaS, you have your own instance of Xacta 360 running in your AWS account. Private SaaS deployments reduce privacy concerns while offering many of the benefits associated with a managed service.

- SaaS solution is deployed in your AWS account
- You control when service provider has access to maintain SaaS solution
- Service provider ensures your Xacta SaaS instance is properly maintained
- EC2-enabled for auto-scalability

SaaS

With Xacta 360 deployed as a SaaS offering, it is hosted for your use in Telos' AWS account. As a Single Tenant SaaS offering you have access to an Xacta instance with a dedicated database, which provides physical, not virtual, data separation.

- Full featured instance of Xacta 360
- Fully managed service means you have no maintenance responsibility

AWS AMI

AMI deployments allow for rapid installation for Xacta in the customers' AWS account.

- Preconfigured to install on low-cost infrastructure (OS and database) in customers' AWS account
- Customer has complete control of application and data
- No managed services provided

Xacta 360 Availability

Xacta 360 is available in AWS US East/West Regions and GovCloud as a SaaS offering and an Amazon Machine Image (AMI). It can also be deployed on premises with ability to manage AWS workloads.

Available on the AWS Marketplace

Visit aws.amazon.com/marketplace/ and search for Xacta 360 to get started with your deployment as either an AMI or SaaS version.

Please contact us for more information on protecting your enterprise with Xacta 360.
