Enterprise Cybersecurity Consulting Services

Telos Cybersecurity consulting practice provides IT security consulting services and solutions throughout the federal government. Our security practice includes more than 140 security analysts and engineers, most with security certifications (e.g., CISSP, CISA, CCNA) and clearances up to TS-SCI, allowing us to work in virtually any environment. Our professional staff’s qualifications, combined with over 20 years of providing security services to DoD, the Intelligence Community, federal civilian agencies, and the commercial marketplace, demonstrate our commitment to providing world-class security services to our customers.

Information assurance is a continuous activity; it requires constant vigilance. As the threats and vulnerabilities to your data, applications, systems and network change, the assessment, remediation, and validation of their security must be updated to reflect the emerging risks of the threats exploiting the vulnerabilities.

Customer Value
Telos delivers solutions on a fixed price basis, significantly reducing lifecycle costs. Industry-leading software solutions and deployment processes result in lower cost, better performance and greater efficiencies.

Xacta® IA Manager
Xacta IA Manager is a continuous risk management framework that automates and enforces IT security processes across the enterprise. Telos provides the following services associated with Xacta IA Manager.

• Quick start implementation
• Long-term deployment support
• Customization of content and workflow processes
• Training

Telos Corporation
Telos is a leading provider of advanced technology solutions that secure the vital assets of the world’s most demanding enterprises. Our customers include military, intelligence, and civilian agencies of the federal government and NATO allies around the world. We protect and defend the systems of our customers with information assurance solutions and services that ensure system availability, integrity, authentication, and confidentiality. Our security consultants protect some of the government’s most critical networks with full security assessment, security engineering, and cybersecurity management services.
