

Xacta® for FedRAMP

Reduce the time and cost needed to achieve and maintain FedRAMP compliance.

- Central repository and collaboration space for FedRAMP stakeholders
- Easily assemble an audit-ready package
- Fast track your approval process with OSCAL
- Simplify continuous monitoring reporting activities
- Automatically generate customer responsibility matrices in OSCAL for clients

Xacta for FedRAMP is an all-in-one tool for managing, testing, and documenting the compliance posture of your cloud offering. Xacta 360 for FedRAMP automates and streamlines the key steps in the FedRAMP process, providing value at all stages of your FedRAMP journey.

Getting Started with FedRAMP: Get Organized Before Calling the Experts

Organizations that leverage Xacta for FedRAMP can get a significant jumpstart on the compliance process. First, Xacta allows organizations to start building their FedRAMP security package by answering questions and following prompts. Next, take advantage of any existing documentation by linking and uploading policies and link artifacts and evidence to FedRAMP security controls.

Proactively Address Gaps: Save Time and Money on Well-Scoped Consulting Engagements

Xacta for FedRAMP gives you the tools you need to conduct your own gap assessments before bringing in outside help—meaning you save money by contracting for just the support you need without incurring additional costs. With Xacta, your security and risk assessment teams will be able to compile and produce well-organized documentation to advisory teams at the start, saving a significant amount of time.

Time and Cost Savings Throughout the FedRAMP Process

Once Xacta for FedRAMP jumpstarts your FedRAMP process, it can then be used to streamline and organize tasks once you're underway. Use Xacta to monitor and report on FedRAMP progress across all teams, as well as:

- Generate, maintain and report on risk assessments and Plans of Actions and Milestones (POAMs)
- Assign controls and or remediation activities
- Replicate changes across the entire package at the touch of a button

FedRAMP Assessment and Authorization: Be Prepared and Build Confidence

Once your SSP has been prepared, you'll be able to build confidence with your 3PAO by providing access to a complete and organized security package. Organizations that use Xacta for FedRAMP reduce time going back and forth with the 3PAO with evidence attached to each control.

Continuous Monitoring: Simultaneously monitor and manage cybersecurity risks and FedRAMP compliance

Achieving FedRAMP certification is certainly a milestone—but, of course, the work doesn't stop there. Maintaining FedRAMP compliance means staying on top of all the details laid out in your security assessment plan. Xacta for FedRAMP is purpose-built for this phase of the FedRAMP process as well through the following features:

- Automating the ingest of security scans into your FedRAMP package
- Leveraging Xacta's predictive mapping to automate control association for technical scan findings that are not currently associated with a FedRAMP control
- Automatic creation of POAMs for failed tests and track remediations
