Trusting Identity Data Across Your Organization

As your organization ingests, verifies and manages identity data, it's critical to produce a single source of truth that you can then link to activity across all your internal workflows. Clear communications and effective relationship management start with accurate and complete identity data—whether you're interacting with customers, employees, vendors, partners, or other stakeholders.

But many challenges present roadblocks to achieving this mission:

- Fractured identity information flowing into the organization from multiple external sources.
- Disparate internal systems that consume and manage identities.
- No synchronization among internal identity tracking systems.
- Conflicting data on individuals and entities between two systems.
- Isolated systems that delay the process to reconcile discrepancies.

IDTrust360® from Telos® enables you to solve these challenges by seamlessly integrating with external and internal identity tracking systems. Our platform consolidates and normalizes all the data so you can achieve that single source of truth. You'll always trust that your internal teams have access to current and accurate identity data for every individual and entity they interact with.

IDTrust360 complies with NIST SP 800-63A requirements as well as federal and state standards, such as the FBI Biometric Transmission Electronic Specification. By making your identities safe, secure, vetted, and easily consumable, IDTrust360 allows you to modernize, simplify, and unify your identity management process within a centralized virtual database of master data.

## IDTrust360 Identity Trust Capabilities

- Collects identity data from multiple external/internalsystems and produces a centralized data store.
- Normalizes data from multiple systems to create a homogenized single source of truth.
- Encrypts data with a reverse proxy edge server so no one outside your organization can see the data.
- Allows for low-code customization of data fields and forms.
- Offers flexibility to adjust identity management to match the requirements of any data model.
- Provides APIs to easily sync centralized identity data with other internal systems.
- Enables accurate identities to be shared across the organization
- Manages centralized identity information to monitor for changes in customer profiles.
IDTrust360

- Identity Verification and Assurance
- Government/Commercial Risk-Based Data Sources
- Biometric Capture and Matching
- Integrated Risk Management
- Document Capture and Validation
- Omnichannel Enrollment

IDTrust360 enables you to secure your enterprise—whether you need to address requirements pertaining to Know Your Customer (KYC), insider threats, access and authorization, or regulatory compliance. The platform rapidly enables digital identity services within complex operational ecosystems that span millions of identity transactions across workstations, kiosks, laptops, smartphones, and access control systems.

Omni-Channel Enrollment Experience Enabled by Mobile, Web, and Client Apps

Identity Verification and Assurance Services

Biometric Capture and Matching Services

Integrated Risk Management Services

Document Capture and Validation Services

Government and Commercial Risk-Based Data Sources

FedRAMP and NIST 800-53 Certified Cloud Environment

Built on an enterprise hybrid-cloud platform that is certified and operational in several U.S. federal agencies, IDTrust360 gives you the flexibility to securely deploy modular services that transform your business-to-business (B2B) identity environment. The solution also supports business-to-consumer (B2C) applications to extend secure identity services to your customers.

Meets stringent federal requirements for cybersecurity and identity standards

Complies with NIST security control and identity assurance requirements

Supports identity services in the largest digital identity programs

Captures identity data to quickly validate individuals are who they claim to be

Contains biometric matching, mobile wallet, and case management features

Meets complex technical, operational, and regulatory identity requirements

Key IDTrust360 Capabilities:

- Supports touchless, live scan, and wet fingerprint card scanning
- Identifies, prioritizes, and mitigates threats to protect enterprise resources
- Tracks criminal history, terrorist watchlists, vetting, and payment processing

- Aligns with federal agency guidelines for digital identity, enrollment, and identity proofing
- Provides facial recognition, live scan, and no-touch fingerprint scanning and matching
- Provides access and appointment scheduling via mobile, web, kiosk, and client apps
