

Network Management and Defense

Telos Secure Networks

DoD and government agencies are turning to managed services to meet critical needs in network management, security, and information assurance. By outsourcing or out-tasking these requirements, they can increase operational efficiency, reduce their overall exposure to IT risk, and lower the cost of these capabilities.

To help DoD and government agencies capitalize on these benefits, Telos Corporation offers a full range of world-renowned IT management and security services:

- Operations and Sustainment
- Security and Compliance
- Defensive Cyber Operations

Because Telos offers these services on a managed basis, you receive their benefit without having to commit your organization to the cost and burden of providing these capabilities yourself. We retain the dedicated human resources and keep up with the latest best practices and technologies in network management and security on your behalf.

Operations and Sustainment

Telos offers capabilities that ensure the consistency and continuity of service required in mission-critical environments:

- SDN/VoIP/VDI/TDM
- Network monitoring/management
- Physical and virtual servers
- Multi-cloud operations
- Security incident event management
- Tech refresh
- User experience
- System administration

Our operations and sustainment offerings reduce total cost of ownership and increase total value while also ensuring service availability, information assurance, and authenticated information delivery. We achieve these objectives by implementing Telos-developed processes and incorporating industry best practices.

Security and Compliance

Telos is the recognized leader in military and government security standards and their enforcement:

- Network security architecture design and implementation
- Network security testing and evaluation
- IT security operations and management
- Risk and vulnerability assessment/mitigation
- Patching and hardening
- DISA STIGs and SRGs

Our capabilities ensure that security and compliance work together to ensure the integrity of information and the success of the mission. Our solutions also meet critical information assurance standards for constant confidence in the organizational security posture.

Defensive Cyber Operations

Telos capabilities enable organizations to anticipate and avoid potential threats, detect and defeat actual threats, and survive and recover from attacks:

- Real-time threat monitoring and analysis
- Control testing, threat detection, and event mitigation
- Incident response and remediation
- Continuity of operations
- Security policy enforcement
- Patch and configuration management
- Encryption setup and support
- Intrusion detection/prevention
- Firewall installation and monitoring
- Vulnerability scanning
- Virus and malware protection

Telos helps organizations minimize the impact of security events on operations while ensuring continuity of operations during attacks. We test security controls, detect threats, respond to events that might compromise information systems, and then report on the status of network defenses.

Global Experience with Challenging IT Environments

Our expertise in managing and protecting enterprise networks is informed by real-world experience in a wide range of disparate environments, including:

- Defense Information Systems Agency (DISA)
- USAF Air Combat Command (ACC)
- Joint Personnel Recovery Agency (JPRA)
- Battlefield Airmen Center (Gulfport CRTIC)
- Arnold Engineering Development Complex at Arnold AFB
- U.S. Air Force flightlines around the world
- Forward areas of Southwest Asia

Engagements like these assure you of our ability to meet the needs of the most challenging IT environments.

Our capabilities give you the confidence to entrust your network and cyber operations to our experienced specialists so you can focus on

strategic areas of your IT capabilities. We can act as your network and cybersecurity management team, performing the full range of technical and administrative roles for your IT environment—including Certificate Authority (CA), System Administrator (SA), Service Management, and Information System Security Officer (ISSO).

Our People and Partners: Key Resources in Serving Your Requirements

Telos identifies, recruits, and retains the most highly qualified personnel to fill our technical positions. Our core values and personnel management practices enable us to attract and retain the best talent available. Our recruiting goal is to acquire talent that has the requisite skill sets, operational hands-on experience, certifications, and security clearances up to and including TS/SCI. This allows Telos to rapidly staff a full complement of personnel for any requirement.

Telos also partners with world-class technology and consulting companies to create a team that's uniquely qualified to serve your IT requirements. The members of Team Telos possess expertise and proven track records in delivering solutions to all DoD services, the Intelligence Community, and civilian federal agencies. Team members complement one another in skills, services, and technology, enabling us to deliver capabilities that meet or exceed your requirements.
